THIS LOOKS GOOD

A COUNTY CHANGES FROM SPRING WHEAT TO WINTER WHEAT AS A RESULT OF DEMONSTRATION WORK.

Only occasionally are the results of demonstration work so marked that the farmers practically change their whole scheme of agricultural practice. Such an instance, however, is reported from Douglas County, Washington. For the past two years the county agent in this county, Mr. F. H. Zentner, with the cooperation and support of the Experiment Station, has been making demonstrations and conducting experiments comparing winter wheat with spring wheat. These experiments and demonstrations have given a yield of more than fifteen bushels per acre in favor of the winter wheat. The results have been effectively brought to the knowledge of the farmers of the county, as is evidenced by the fact that more than eighty per cent of the land is being prepared for seeding to winter wheat this fall, whereas two years ago scarcely any was raised in the county.
